- b) 2013 08 22 letter from TruGreen
(1 page).
- c) Site work orders (93 pages).

101 North East Harvey Street, Grimes, Iowa 50111-2051 515.986.3036 Fax 515.986.3846

City of Grimes, Municipal Separate Storm Sewer System, Iowa DNR, NPDES Permit # 77-36-0-02

Pesticide and Fertilizer Management Program

Purpose

The purpose of this program is to develop, implement and enforce methods to reduce pollutant discharge associated with storage, application and disposal of pesticides and fertilizers for municipal operations.

Implementation

An integral part of this program is determining the minimum effective application rate of pesticides and fertilizer. In determining the effective application rate it is also important to consider the chemical composition of the products being applied.

The City is promoting the use of "Phosphorous-free" fertilizer on established lawns.

Currently, the City does not store, apply or dispose of pesticides or fertilizer. This does not relieve the City from requiring that those who perform lawn care service will do so in a manner that is consistent with City standards. The City contracts, on an annual basis, for lawn care service. The lawn care service provider for 2013 is:

TruGreen LawnCare
301 SW Oralabor Road
Ankeny, Iowa 50023
515.289.0002 (Phone)
515.289.0075 (fax)

Matt Hibbert, Commercial Account Manager, Des Moines #5755/West Central Region
matthibbert@trugreenmail.com, www.trugreen-survey.com

MATERIALS MANAGEMENT

The following is a list of possible materials to be onsite and is not meant to be comprehensive. Hazardous materials shall be stored in areas where the contamination of storm water is minimized in the event of a spill. The contractor will be responsible for using, storing, and disposing of these materials in accordance with state and local law.

- Soil stabilization additives
- Fertilizers
- Pesticides

The following are the material management practices that will be used to reduce the risk of spills or other accidental exposure of materials and substances to storm water runoff.

- An effort will be made to store only enough products required to do the job.
- All materials stored onsite will be stored in a neat, orderly manner in their appropriate containers and, if possible, under a roof or other enclosure.
- Products will be kept in their original containers with the original manufacturers' label.

- Substances will not be mixed with one another unless recommended by the manufacturer.
- Whenever possible, all of a product will be used up before disposing of the container.
- Manufacturers' recommendations for proper use and disposal will be followed.
- The site superintendent will inspect daily to ensure proper use and disposal of materials onsite.
- Products will be kept in original containers unless they are not re-sealable.
- Original labels and materials safety data will be retained; they contain important product information.
- If surplus product must be disposed of, manufacturers' or local and State recommended methods for proper disposal will be followed.

Application

Pesticides and fertilizers will be applied at the most minimal rate, as determined by a study utilizing varying application rates, that will provide acceptable results. Until such time as the study is completed, product will be applied only in the minimum amount recommended by the manufacturer. Product shall only be applied during weather conditions that limit exposure to storm water.

SPILL RESPONSE

- Manufacturers' recommended methods for spill cleanup will be clearly posted and personnel will be made aware of the procedures and the location of the information and cleanup supplies.
- Materials and equipment necessary for spill cleanup will be kept readily available. Equipment and materials will include but not be limited to brooms, dustpans, mops, rags, gloves, goggles, kitty litter, sand, sawdust, and plastic and metal trash containers specifically for this purpose.
- All spills will be cleaned up immediately after discovery. Contaminated soil may require remediation.
- The spill area will be kept well ventilated and personnel will wear appropriate protective clothing to prevent injury from contact with a hazardous substance.
- Spill of toxic or hazardous material will be reported to the appropriate State or local government agency, regardless of the size.
- The spill prevention plan will be adjusted to include measures to prevent this type of spill from reoccurring and how to clean up the spill if there is another one. A description of the spill, what caused it, and the cleanup measures will also be included.

REPORTING OF HAZARDOUS CONDITION

Because activities may include handling of certain hazardous substances during the course of performing lawn care, spills of these substances may create a hazardous condition and are required to be reported. Iowa law requires that as soon as possible but not more than six hours after the onset of a hazardous condition the IDNR and local sheriff's office or the office of the sheriff of the affected county be notified. The Owner and engineer should also be informed of the hazardous condition in a timely manner.

The contractor shall submit a report to the engineer within 14 calendar days of a hazardous condition. The report shall describe the release and the circumstances leading to the release. Steps to prevent the reoccurrence of such releases are to be identified in the plan and implemented.

Training

All personnel who handle and/or apply pesticides and fertilizer shall be trained and certified in the proper handling and use of those products. Training shall include, but not be limited to, storage, handling, mixing, disposal, application rates, personal protective equipment and spill response.

Personal Protective Equipment

All personnel who handle and/or apply pesticides and fertilizer shall be provided personal protective equipment appropriate for the hazard(s) and shall be required to use said personal protective equipment.

Application Rate Study

Two test areas, 1,000 s.f./area, will be set aside for testing of each product utilized by the lawn care service provider for general lawn care. Excludes product(s) used for "spot" control (i.e. crack and crevice, bed weed control). General area shall receive product at the manufacturer minimum recommended rate. One test bed shall receive product at a application rate 10% below the minimum and the other test bed shall receive product at a application rate 25% below the minimum. The test plots shall be labeled for identification (use and product) and photographed a minimum of six times during the test duration. Test duration shall be one growing season.

2013 Additional Information

The information presented below is intended to demonstrate the City is taking steps to minimize the use of chemicals to control weed growth while promoting the establishment of turf grass.

It is recognized a healthy stand of grass promotes storm water infiltration and diminishes soil loss.

It should be noted that TruGreen does NOT provide "a one-size fits all" approach to turf maintenance. Their standard commercial service agreement suggests seven (7) treatments or applications per year make for the healthiest vegetation. The table below shows the areas/sites and the number of treatments/applications each site is to receive in 2013. The number of treatments/applications varies from three (3) to six (6) depending on location and use. Sports Parks have the heaviest foot traffic and need more attention than traffic islands and trails. The City does not have the seventh (7th) treatment applied because it is scheduled for late fall/early winter and is susceptible to excessive run-off if weather isn't timed correctly.

Mission Due Date
No scheduled service for this round
Date Completed

General Comments:

- 1) It is common for newly established areas to require a greater number of treatments until weeds are minimized and grass density maximized
- 2) Fertilizer containing Phosphorous is utilized only for establishing newly seeded areas.
- 3) TruGreen makes site visits during the year and confers with their Regional Technical Manager Roger May to propose to the City the chemical treatments for each area. The appropriate chemical is applied to treat the weed(s) that is present at that time of year.
- 4) The strength/composition of the fertilizer is varied to meet the nourishment need.
- 5) Some weeds are "spot treated" instead of applying chemical over the whole area.

Please see the attached letter, dated August 22, 2013, from Roger May, PhD, Regional Technical Manager, regarding application rates for Nitrogen (N).

Fire Station Basin, 200 S. James St. 4,200 s.f. (0.10 acres)

August 22, 2013

Dear Brandt,

TruGreen fertilizers and rates are customized for each region of the country to deliver superior results to our customers. The fertilizer rates have been established from university research, regional requirements, and TruGreen research programs. Our Iowa programs use fertilizers that are 100% phosphorus free. We only use phosphorus containing fertilizers to establish seed or sod, and to correct phosphorus deficiencies identified from soil tests.

The following are the nitrogen rates per 1000 sq ft that we use for cool season turf in Iowa:

April	0.9lb N
May – June	0.75lb N
July – August	0.5lb N
Sept – November	0.75lb N

The typical commercial property will receive 2.5 – 4 lbs of N/1000 sq ft per year. The N rates per 1000 sq ft and the annual rates N are well established for cool season turf. The N rates that we use build density in spring and fall, maintain color in the summer on irrigated lawns, and create healthy lawns that provide numerous benefits to the environment.

Sincerely,

Roger May, PhD
TruGreen Region Technical Manager

COMMENTS

TODAY I APPLIED FERTILIZER WITH PREEMERGENT WEED CONTROL. THIS WILL HELP WITH EARLY GREEN UP OF THE TURF AND HELP PREVENT ANNUAL WEEDS AND CRABGRASS. I APPLIED BROADLEAF WEED CONTROL TO YOUR LAWN TODAY. THE WEEDS SHOULD BEGIN TO CURL IN 7-10 DAYS. COMPLETE CONTROL MAY REQUIRE 2 - 3 WEEKS. I SEE YOU HAVE SEEDED SOME BARE AREAS, I AVOIDED THEM WITH THE PRE-EMERGENT TO PROTECT IT. IT WAS NICE VISITING WITH YOUR COWORKER TODAY. I TRIED TO CALL BUT THE NUMBER IS NO LONGER IN SERVICE, PLEASE UPDATE US. THANK YOU FOR CHOOSING TRUGREEN.

COMMENTS

I APPLIED BROADLEAF WEED CONTROL TODAY. WEEDS SHOULD BEGIN TO DECLINE IN 7-10 DAYS BUT ALLOW 2-3 WEEKS FOR COMPLETE CONTROL. TODAY I APPLIED FERTILIZER WITH PREEMERGENT WEED CONTROL. THIS WILL IMPROVE THE COLOR AND DENSITY OF YOUR LAWN AND HELP PREVENT ANNUAL WEEDS AND CRABGRASS. IT WAS NICE VISITING WITH YOU TODAY. THANK YOU FOR CHOOSING TRUGREEN. YOU HAVE SOME VERY THIN OR BARE AREAS THAT REQUIRE SEEDING. THESE AREAS ARE MORE PRONE TO WEED PROBLEMS.
